More action needed to meet energy goals by 2030, new report finds

Pyrometallurgy near the end of the 20th century. The 2013 Protests in Brazil In June and July 2013 Brazil was rocked by protests by hundreds of thousands of people.

Sustainable development and industrial ecology

Governments, industry and communities must act to ensure transport becomes more Â' not less Â' sustainable.

Technology needs for heavy industries

We seek to value diversity, prioritizes the health and safety of our employees and establish open relationships, contributing to the development of the communities in which we operate. Genetic engineering holds promise not only in agriculture, but also in aquaculture where it can lead to increased production of marine and freshwater seafood.

Sustainable development and industrial ecology

Available at accessed 19 May 2020. The concept is used to convert the hours worked by several part-time employees into the hours worked by an equivalent full-time employee ideally the comparison is standardized for gender and industry sector. Above all, they were aware of the extraordinary chance afforded by the Paris conference.

Sustainable Development: Critical Issues

This new data is a warning for world leaders to take more focused, urgent action on access to energy and clean cooking, improving efficiency and use of renewables to meet our goals.

Mineral supply for sustainable development requires resource governance

Addressing the objectives of sustainable development necessitates the institutional and technical capacity to assess the economic, environmental, and social implications of development strategies and to formulate and implement appropriate policy responses. This is about increasing the sustainable management of resources and achieving resource efficiency along both production and consumption phases of the lifecycle, including resource extraction, the production of intermediate inputs, distribution, marketing, use, waste disposal and re-use of products and services. They were overtaken by Africa in 2013.

Mineral supply for sustainable development requires resource governance

In order to operate safely and work well alongside communities — and especially those adjacent to our operations — we seek to manage and mitigate risk and social impacts and understand their needs and demands, collectively building sustainable solutions for all involved.
