## A huge flood in the Fraser River valley, British Columbia, near the Pleistocene Termination

Matrix material within conglomerate units is typically angular to subangular, poorly sorted, and is mostly composed of volcanic glass shards with minor amounts of quartz, feldspar, chert, biotite, and magnetite. In these areas, extension persisted following proximal hotspot volcanism between 8 and 5 Ma in the Knoll basin, and as late as Pliocene in the Rogerson graben ; ;.

## The Quaternary glacial record of British Columbia, Canada

At about RM 6 RK 10 , it carries the. American Indian Holocaust and Survival: A Population History Since 1492.

## Page de levé géochimique

In the Squamish area the Department took control of Crown lands on which substantial improvements had been created under a now bankrupt ski development.

## Willamette River

By early June the eight-man field crew began work and, with the aid of helicopter support, nine working camps were established before the crew completed its work and returned to Victoria in September for disbandment.

## Quaternary stratigraphy and glacial history of the Fort Nelson (southeast) and Fontas River (southwest) map areas (NTS 094J/SE and 094I/SW), northeastern British Columbia

It is also cut off from the Pacific Ocean by the Alaska Panhandle.

## Maumee River Map

Early Phase The early phase began with waning of slip on the Knoll-Ruby fault system coupled with a basinward shift in faulting reflected by the development of intrabasin faults, including the Summer Camp and Henry faults in the northern part of the Knoll-Ruby basin and an unnamed fault, or faults, to the south cf. Fish in the Willamette basin include 31 native species, among them , , and , several species of , , , and , as well as , , and others. Conservation of estuaries has been another primary concern and all Crown foreshore leases at Comox and Campbell River are currently under review pending the preparation of foreshore management plans by short-term task groups under the leadership of Environmental Section personnel.

### **Geology of the Upper Cretaceous Nanaimo Group, Vancouver Island and Gulf Islands, British Columbia [...]**

This initial screening of applications by Land Inspectors had made it possible to advise applicants quickly when it is clearly evident that alienation of Crown land would not be in the public interest.
