MWRA

Filling commenced on August 14, 1939 and was completed in 1946 when water first flowed over the spillway.

Evidence for igneous differentiation in Sudbury Igneous Complex and impact

Origins of the Extra and Intermediate High Systems Around 1951, several pump stations were constructed to take suction from WASM 3 and supply Extra or Intermediate High Service to the fast growing suburbs along Route 128.

MWRA

A solution to the problem of magnetostatic location and identification of compact ferrous objects of arbitrary shape was developed by McFee et al.

Sudbury

Cambridge University Press, London, 320 p. Many of these expansions looked to use gravity for supplying water instead of costly pumping.

Gravitational field

One can literally lose weight, if only very slightly, by moving from a gravity high to a low! The Cochituate Aqueduct was completed to transport water to the Brookline Reservoir from which pipelines were constructed to small distribution reservoirs in all parts of the city. In mineral exploration and engineering projects, applicability of seismic imaging is often limited and other geophysical methods take the front seat.

Gravitational field

Planners had not foreseen this development and supply had become inadequate. By 1978, the Boston Low demand had been transferred to the

Weston Aqueduct Supply Mains Nos 1 and 2 , supplemented by pressure reduction facilities from the City Tunnel. The sample-spike mixture was dissolved in HF-HNO₃ in Savillex screw-cap beakers on hot plate mafic rocks or in sealed Teflon bombs in an oven at 180 °C felsic rocks for 48 h.
