## Tectonic Landforms and Features—under development

Six of the majors are named for the continents embedded within them, such as the North American, African, and Antarctic plates. Challenger Deep in the Mariana Trench Pacific Ocean has the greatest ocean depth, at 36,201 ft below sea-level.

## Plate Tectonics

Research in the CCGO is conducted jointly with collaborators from the Jackson School of Geosciences, other ICES centers, the College of Engineering, the Department of Computer Sciences, other universities including Carnegie Mellon, Penn, MIT, Columbia, and Emory, and Sandia National Labs. It has full detail and everything important on Plate Tectonics. As the mash-up continues, the mountains get higher.

## Tectonic, Volcanic and Surface Processes

At continental-continental convergent margins neither plate subducts. One is our automatic handler system created at California Institute of Technology and adapted for our needs.

## The Different Types of Tectonic Landforms on Earth

Helens in Washington in 1980.
