Do political connections matter for firm innovation? Evidence from emerging markets in Central Asia and Eastern Europe

Ultimately, labor shortages and rising wages decrease the rate of profit and compel some firms to look for new locations with surplus labor and lower wages that can be integrated into macro-regional production networks for future growth and excess profit opportunities. However, the abstract models cannot be related to empirically established cases.

RePEc: Simeon Djankov

This figure only aims at illustrating the developments within our sample of firms. In addition to the author, Pavla Žižalová, Jan Ženka, Pavol Hurbánek and Miroslava Poláková participated on organizing and conducting company interviews. Unmet, these challenges could undermine the sustainability of growth, and China's promise could fade.

Institutional barriers and job creation in Central and Eastern Europe

Restructuring events were classified by their announcement year even though some were planned over the course of several years.

The impact of corruption and ownership on the performance of firms in Central and Eastern Europe

Foreign firms also rapidly expanded production in factories they built in Eastern Europe between 1990 and 2004 ;. The other dependent variable, FDIISij, represents FDI inward stock in euros.

RePEc: Simeon Djankov

Given the importance of this group of high-growth enterprises, such a step appears necessary to understand the full extent of the effect of institutions on intensive margin job creation in CEE economies. Princeton, NJ: Princeton University Press. These factors and low wages allow for a

relatively low level of investment in education and social services.

Bulgaria, Czech Republic, Hungary, Poland, Romania, Russia, Slovakia and Slovenia. Subjects include bank and enterprise restructuring and implications for corporate governance and company performance, and the performance of fixed exchange rate regimes in the post- stabilization phase of transition. Four-fifths of all newly created jobs in the EU + 1 were created by foreign firms, which also accounted for almost half of all job losses.

Privatization and Restructuring in Central and Eastern Europe

Secondly, it addresses dynamic processes that are compatible with sustainable growth and resource upgrading in the local economy. Fourth, the ERM database covers job losses more accurately than job creations because companies are less likely to report job creations and its media coverage tends to be lower. Research Policy, 46 1 , 280-291.

On the determinants of SME capital structure in Central and Eastern Europe: A dynamic panel analysis

Many studies now confirm the positive role of increased competition in raising enterprise performance. The ERM database has five important limitations.
