Professional workers were the fourth largest group, with private-household, sales, and managerial workers following in that order. Thus only 23 percent of these women were working less than 35 hours a week in 1964 compared with 38 percent of the single women and 32 percent of the married women husband present. While the laborforce participation rate of nonwhite teenage girls 23 percent in 1964 was lower than that of white girls 29 percent , their unemployment rate was more than twice that of white girls—30.
