13. Fishes, Amphibians, and Reptiles

Some aquatic turtles, such as snapping turtles and soft-shelled turtles, have eyes closer to the top of the head. Some distinguishing characteristics of this species are the large mouth, called and oral disc and a large eye.

They remain in amplexus with their cloacae positioned close together while the female lays the eggs and the male covers them with sperm. Fish have streamlined body with fins for locomotion through the water column. Reptiles and birds are the only known living descendants of the dinosaurs.

Reptiles and Amphibians Found in Alaska, Alaska Department of Fish and Game

This turtle has a beautiful wood-grained look to its upper shell. These noises are at a very high frequency, and so cannot be heard by humans.

Reptiles and Amphibians

You may ask: Does it have ears? A permanent set of teeth grow through soon after birth. The brain consists of equal parts, , and.
