Association of clinical characteristics with decision making in patients with severe lower extremity trauma

Methods A systematic search using electronic three databases and hand searching methods for primary research published between 1980 and 2014 was undertaken; followed by a rigorous screening and quality appraisal process. Timing of the physical examination depends on the last reported incident of sexual contact or if symptoms are currently present.

1: Introduction to Multidisciplinary Teams

TABLE 1 Risk Factors for Child Maltreatment Caregiver factors Criminal history, inappropriate expectations of the child, mental health history, misconceptions about child care, misperceptions about child development, substance abuse Child factors Behavior problems, medical fragility, nonbiologic relationship to the caretaker, prematurity, special needs Family and environmental factors High local unemployment rates, intimate partner violence in the home, poverty, social isolation or lack of social support Information from references through.
