We had guilt all over us because of what we had done to other people.

Why farmers are using glyphosate to kill their crops — and what that might mean for you

Technically, black molds do not constitute a disease, since the fungi are saprophytic and invade only dead or dying plant tissue. The plant growth regulator herbicides are typically good on summer annual weeds like , pigweed and , but vary in their control of some of the more common winter annual weeds like. Some varietal difference in resistance to spring freeze injury has been reported, but it is mostly caused by differences in plant growth stages when freezes occur.
