### Australian Plant Name Index

It has pale pink to dark purple flowers with a red center and oval shaped lush green leaves.

### Flora of Australia

Koalas eat leaves from this tree. Australia's salt marshes and wetlands are covered by a large variety of salt and drought tolerant species from the which include the saltbushes and bluebushes and. The walls are then covered inside and out with mud.

### Australian Plant Name Index

From 25-10 MYA pollen records suggest the rapid radiation of species like , Casuarina, , and the , and the development of open forest; grasslands started to develop from the.

### Australia's native plants

Koalas feed exclusively on certain species of eucalypts. In drier interior areas and in some mountain areas, there are more than one hundred smaller species of eucalypts that are known by the Aboriginal name mallee. Kangaroo Paw flowers between August and October and ranges from yellow and green to red, pink, orange or brown.

### Australian Flora

Australian vegetation is dominated by two types of plants—the eucalyptus and the acacia. The Victorian Department of Sustainability and Environment maintain a list of species presumed extinct in Victoria; they list 51 extinct taxa, those not listed under the include: , , , , , , , , , , s.

### List of threatened flora of Australia

A close correlation exists between rainfall and vegetation type throughout Australia. Timber from Bull Kauri can be used in house framing and flooring. As Australia , local and global had a significant and lasting effect: a circumpolar oceanic current developed, atmospheric circulation

increased as Australia moved away from Antarctica, precipitation fell, there was a slow warming of the continent and conditions started to develop.

### **Native Flora of Australia**

The most important determining factor is rainfall, which is followed closely by temperature. In the mid-1980s restaurants and wholesalers started to market various native food plant products. Several schemes of varying complexity have been created, the most recent scheme developed by the divides Australia's terrestrial flora into 30 , and 67.
