### Welcom to Basic Machinist

With improvements in technologies, such as computer numerically controlled CNC machine tools, autoloaders, high-speed machining, and lights-out manufacturing, machinists will still be required to set up, monitor, and maintain these systems. Machinists and tool and die makers work in machine shops, toolrooms, and factories. The job of a CNC machinist relies on mathematical precision and the first step towards receiving the proper training begins at the high school level. The focus of the program is on familiarizing participants with the content of the organizing field education training modules, reviewing principles and techniques for effective adult education and trainins, and adapting training materials for different situations. SCOPE: To train entry level Marines on Computer Numerical Controlled CNC machines, machinist operations and maintenance procedures to support unit and depot level maintenance of Marine Corps equipment.

### National Tooling & Machining Association

For others it might be job security or fair treatment.

### **Course**

Some work more than 40 hours a week. The work environment typically consists of a shop where CNC machinists work under the direction of a shop supervisor.

### **Machinists and Tool and Die Makers : Occupational Outlook Handbook: : U.S. Bureau of Labor Statistics**

These machines produce all kinds of parts for automobiles. . The best way to encourage your employer to recognize your union and negotiate a fair contract is to build a strong organization where you work.
