In many species budding continues for a period of time, one or more daughter buds forming on the original bud and the daughter buds in turn continuing the process. These are glycine, alanine, valini? Whether this is a general type of mecha- nism by which other viruses are formed in susceptible cells remains to be determined.

## INOSITOLS

The next three orders contain peritrichously flagellated or related species; the following three orders contain the bacteria that glide, creep, or are flexuous in their movements when they are motile; the tenth order consists of apparently nonmotile parasites The proposed classification based on

an outline supplied through the courtesy of Dr H J Conn and a general review by Dr R. It should be apparent that the nature of the food available in a given habitat will determine to a considerable extent the types of organisms which will grow and predominate in that environment.
