The shortest survival rate was noticed in group III. In chronic HF, with reduced EF, renin-angiotensin system RAS blockers, beta-blockers, and mineralocorticoid antagonists MRAs were used in 92. SMOS contains a passive L-band radiometer that is used to retrieve surface soil moisture at 35-km resolution with an accuracy of 0.

**improving soil moisture: Topics by Science.gov**

ANIMALS 51 client-owned dogs and 27 client-owned cats.

**improving soil moisture: Topics by Science.gov**

This system provides basic GIS map functions, massive data process and soil moisture products analysis etc.

**improving soil moisture: Topics by Science.gov**

In the five assimilation methodologies, the state vector contains either i pressure head, or ii log-transformed pressure head, or iii soil moisture, or iv pressure head for the saturated zone only, or v a combination of pressure head and soil moisture, pressure head for the saturated zone and soil moisture for the unsaturated zone. Area 6-20 had the greatest discriminatory power to differentiate the post-MI patients at 1 year from the controls.

**improving soil moisture: Topics by Science.gov**

Published on behalf of the European Society of Cardiology.

### **european heart rhythm: Topics by Science.gov**

Our investigation involved static cosmic-ray neutron sensors and rover surveys across both broad  $36 \times 36$  km at 9 km resolution and intensive  $10 \times 10$  km at 1 km resolution scales in a cropping district in the Mallee region of Victoria, Australia. We found near significant decrease in high beta absolute power, increase in alpha relative power and significant increases in lower alpha and higher above beta band coherence during 3~min epochs of heart coherent meditation compared to 3~min epochs of heart non-coherence at baseline. Concerning the morning activity and night resting periods, the results were similar as for the whole day.

### **improving soil moisture: Topics by Science.gov**

These components are: i field validation of a relationship between soil moisture and changes in the Earth's gravity field, from ground- and satellite-based measurements of changes in gravity; ii development of a modelling framework for the assimilation of gravity data to constrain land surface model predictions of soil moisture content such a framework enables the downscaling and disaggregation of low spatial 500 km and temporal monthly resolution measurements of gravity change to finer spatial and temporal resolutions ; and iii further refining the downscaling and disaggregation of space-borne gravity measurements by making use of other remotely sensed information, such as the higher spatial 25 km and temporal daily resolution remotely sensed near-surface soil moisture measurements from the Advanced Microwave Scanning Radiometer AMSR instruments on Aqua and ADEOS II. Changes in MAPK and circadian rhythm gene expression were identified as early as 10 days. Geographical correlated areas of agreement and disagreement corresponding to underlying terrain are identified.
