Crossed products of C^*

In addition to providing the basic definitions and results, the main focus of this book is the fine ideal structure of crossed products as revealed by the study of induced representations via the Green-Mackey-Rieffel machine. Your print count will reset on at.

Twisted crossed products of C^*

. This corresponds to X having no non-zero absolutely continuous G -invariant measure.

Products of C^*

According to , every vector which is cyclic for the factor and its gives rise to a 1-parameter modular automorphism group.

Cpca

We let K be the Hilbert space of all square summable H -valued functions on G .

Crossed product

Objective Mathematica Slovaca, the oldest and best mathematical journal in Slovakia, was founded in 1951 at the Mathematical Institute of the Slovak Academy of Science, Bratislava. For one-parameter automorphism groups we study the cross property for covariant representations, where the generator of the implementing unitary group is positive. Moreover if every finite set of elements of G generates a finite subgroup or more generally if G is amenable then the factor is the hyperfinite factor of type II 1.

Crossed product

For example, we can recover the lattice of ideals of B .

Crossed product

Prerequisites and Assumptions I have tried to keep the required background to a minimum in order to meet the goal of providing a text with which a graduate student in operator algebras can initiate an investigation of crossed products without having to consult outside sources. As a respectful international mathematical journal, it publishes only highly nontrivial original articles with complete proofs by assuring a high quality reviewing process. This corresponds to the action of G on X being transitive.
