All About Sharks for Children: Animal Videos for Kids

Numerous sharks are fished commercially. Some common communications involve zigzag swimming, head shaking, hunched backs, and head butts. Beautifully streamlined and powerful swimmers, those open-ocean sharks are adept at feeding on fast , , and the like.

shark

Subscribe to FreeSchool: Visit us on Facebook: Check our our companion channel, FreeSchool Mom! While the oceans are vast, there are few refuges from industrial fishing, and some pelagic species, such as the oceanic whitetip have suffered massive population losses due to their inability to reproduce more quickly. They rarely migrate and eat less than most sharks. Controls on fishing are woefully insufficient.

50 Amazing Shark Facts

What makes sharks different from fish is that their skeletons are made of cartilage instead of bone.

Sharks

Sharks lose teeth regularly and can go through 30,000 teeth in their lifetime. Tuna purse-seiners also catch sharks, although these have a better chance of being released alive, while gill nets are an ecological disaster, catching almost anything in their path, including whales, dolphins, turtles and sharks. Typically they travel in pairs but have been seen in schools of 100.
