Heritage Coast

Deformation structures formed during sedimentation range from early, shallow depth sliding and slumping, to deeper-burial level deformation of beds producing intense shearing.

Appendix k metadata and bibliographic database final_dec2010

In 1822 he and his wife Mary found the fossilised remains of the first recognised dinosaur, later named Iguanodon.

Have your say

This classic section near Swanage in eastern Dorset shows the thickest well-exposed sequence of lagoonal Purbeck strata in England, with almost 250 numbered and described beds. Agnes Head, north Cornwall coast.

What is World Heritage?

The brief was to provide the National Trust with a complete set of maps by the end of 1965 together with accompanying reports for each coastal county. This contrasts with the coasts of, where is the only heritage coast, or the south-east stretch of the English Channel which has only very sporadic stretches.
