### Nutrition and Feed Management: Unweaned Calves

Antibiotics are usually given to reduce the effects of secondary bacterial infections.

### PPT

Den vanligaste foderstaten under uppfödningperioden innan inkalvning var spannmål, hö och ensilage.

### Housing, Feeding and Management of Calves and Replacement Heifers in Swedish Dairy Herds

Continuous flow systems are generally more difficult to clean, requiring a cleaning procedure similar to that used in milking systems, but in many cases the cleaning process can be automated. Therefore, on the same diet, RUP proportions are higher in animals with high rates of feed intake than in those with low rates of feed intake.

### Feeding for calf growth, even in the winter

These represent minimum requirements; diets with higher NDF concentrations present no problem and are generally appropriate for animals with relatively low energy requirements. See also , and Calving is high risk event for both the cow and the calf.

### Dairy Calf and Dairy Heifer Management

Insufficient growth rates result in either an older age at first calving, which increases the cost of heifer rearing, or smaller dams at first calving, which limits milk production and conception rates during the first lactation. Choose one of the following subcategories to view in-depth articles and fact sheets about dairy calf and dairy heifer management.

**Livestock:: Cattle:: Feed Management Animal Husbandry :: Home**

Finally, the amount of lactose in the mix is greater than the lactose in whole milk.

### **Raising dairy steer calves for profitable beef production**

The calves were, as a median, 5 days old CR: 1—10 when they were first offered hay, 14 days old CR: 7—28 when they were offered concentrates, and 60 days old CR: 30—120 when they were offered silage. Managing rumen health and dietary fiber adequacy can be as challenging with pasture-based systems as with other dairy feeding systems.

### **Feeding and Nutritional Management of Dairy Cattle**

Such systems require intensive management of pasture for optimal dry-matter and nutrient yields and for optimal feeding and nutrition of high-producing modern dairy cows.
