Similarly, studied a sample of Brazilian equities for the period 1995—2010 and empirically found that liquidity is positively correlated with firm size and the number of shares in issue. In particular, the data for the respective markets were compiled as a snapshot on a specific trading day which may not be representative of the underlying behaviour of the sampled stocks.

### **The determinants of securities trading activity: evidence from four European equity markets**

If crises hurt primarily the poor, however, and if capital regulation lowers systemic risk, then capital regulation should lower income inequality.

### **Capital**

In underdeveloped countries like Nigeria, the development and growth of stock markets have been widespread in recent times.

### **The Impact of IPO on the Secondary Stock Market—An Empirical Research**

Drake and Vetsuypens also found that the

median value of settlements as a percentage of aftermarket losses was 23. From the chart no clear pattern emerges.

### **Where do firms issue debt? An empirical analysis of issuer location and regulatory competition in Europe**

For these assets, balance sheet lenders can form a group to share the risk of a single large loan.
