Longer term development in crises at the nexus: Bangladesh

We use principal components analysis to assess vulnerability to climate change between and within the north and south regions.

Agro

On one hand, global croplands are significantly reduced by urbanization growth, the overexploitation of fertile lands and deforestation. New-Tehran is the capital of Iran and the most-populated province; it has about 74% of irrigated area and 71% of crop production of Tehran during 2009—2015. Under the CCFS scenario, localized food marketing will be structured more efficiently; which helps farmers economically prosper.

Agro

Climate-smart agriculture for food security. It examines how the activities of administrative personnel are affecting the growth of agriculture by keeping the agricultural experts out of the decision making process. The applicability of this index was demonstrated through a global life cycle assessment of cotton production by Pfister et al.

Development of home garden model for year round production and consumption for improving resource

Unit inefficient blue WF values vary from 0. World Economic Forum: Water Crises are a Top Global Risk 2015. This would reduce the overall system cost while improving domestic energy security and resilience.

Assessing vulnerability to climate change: Are communities in flood

Considering limitations in data availability and the available literature, we shortlisted key agro-economic and socio-environmental indicators and studied the relationship between food security and these indicators at a province scale see Table in the supplementary information. The following

daily soil water balance is simulated by the model for the rooting zone using Eq. Our findings inform decision-makers about their options and how likely each option affects agro-economic and socio-environmental settings from a water and food security perspective on provincial or national scales.

Assessing vulnerability to climate change: Are communities in flood

CCFS scenario—the number of provinces with unsustainable blue VW export decreases from 23 to 22 provinces Fig.
