This subsection describes the JDBC methods that are not supported, the methods and features that deviate from the specification, and features that are Trafodion extensions to the JDBC standard. Note that using ON NECESSARY COLUMNS will only identify those columns that have been previously requested by the optimizer but do not exist.

[TRAFODION

Apache Trafodion Home

Trafodion reads HBase metadata in order to process these tables. The information contained herein is subject to change without notice. There are columnfamilies in the table of HBase.

Troubleshooting the Installation

If you can decide in this step that the SQL text you enter is in the cache, you will directly return to the execution plan.

Database of Databases

Data type: String Default: FALSE Value Scenario What Happens FALSE The driver is unable to translate all or part of an SQL statement, then the translation is unspecified.
