Make Serendipity Work for You

Here's a sample passage by anthropologist and naturalist Loren Eiseley. Students should count and write down the number of days between full moons.

Eyes on the Sky, Feet on the Ground: Chapter One

As we have seen in Chapter 1, the motion of the stars can be used as a calendar of sorts. We make a note of it.

SAO Telescope Data Center

But the Catholic Church was supposed to celebrate Easter on the first Sunday after the first full moon after March 21, the vernal equinox. Copyright 2000, Elizabeth Abrams, for the Writing Center at Harvard University. If we happen to catch a dimming, we will immediately send the information to larger telescopes to learn as much as we can about the star, and see if we can find any clues.

Improve Observation

Materials: Calendar for current year with moon phases; paper; pencil.

Outlining

Interestingly, the Babylonians were one of the first to separate the year into weeks of 7 days. Liao, An evaluation of the ability of the Ozone Monitoring Instrument OMI to observe boundary layer ozone pollution across China: application to 2005-2017 ozone trends, Atmos. At the International Date Line 180°, it should be six o'clock Tuesday morning.

Summary

We can use the graph of sunrise and sunset times from that activity or make a new one from an almanac like the Farmer's Almanac. Ask students to predict where the shadow will fall after a certain time interval, such as 15 minutes or an hour. Although this calendar would make it easier for

people to remember dates and share holidays, it has not been adopted.

On the Ground News Reports

Its differing appearance as it follows its cycle of phases is a natural and obvious way to track time. How could we shorten the time? These observations will be used to track the motion of the target over the course of the night. How does it compare to clocks like the sundial? Replace the dome on the oaktag outline aligning the marks on the dome and the oaktag.

Harvard University Astronomy Lab and Clay Telescope

Farmers planning their crops need to know when to plant their fields.
