A mesh where a row and a column cross indicated the percentage of the choice of a certain kind of pastime in a relevant group among fathers of boys, fathers of girls, married mothers of boys, married mothers of girls, single mothers of boys, single mothers of girls. Raskryto sodержanie metoda proektov v usloviyakh sovremennogo obrazovaniya. Moscow: VNII informatsii po stroitelstvu i arkhitekture.

Shared activities of parents with their preschool children during family pastime. Psychology in Russia: State of the Art

In other words, we looked at the difference between pastime organization for the boys and for the girls in two-parent and separated families. As a result three bipolar factors were determined: factor F1 41.

Автори́ферат на тему «Структурно

Like the married mothers, they preferred to play together with their sons, but at the same time they often chose to watch TV together and to play video games virtual communication. Moscow: Institute for the Sociology of Education RAE. This gap is rather significant, and it allows us to conclude that the mothers as opposed to the fathers were more active and more often involved in activities that they shared with their children.
