

# Molecular mechanisms of transport - proceedings of the 22nd Bari Meeting on Bioenergetics, International Symposium on Molecular Mechanisms of Transport, Bari, Italy, 29 September-1 October 1991

Elsevier Science Publishers - Molecular mechanisms of transport : proceedings of the 22nd Bari Meeting on Bioenergetics, International Symposium on Molecular Mechanisms of Transport, Bari, Italy, 29 September 1 October 1991

Description: -

-

Energy Metabolism -- congresses.

Cell Membrane -- metabolism -- congresses.

Biological Transport -- congresses.

Cell metabolism -- Congresses.

Cell membranes -- Congresses.

Biological transport -- Congresses. Molecular mechanisms of transport - proceedings of the 22nd Bari Meeting on Bioenergetics, International Symposium on Molecular Mechanisms of Transport, Bari, Italy, 29 September-1 October 1991

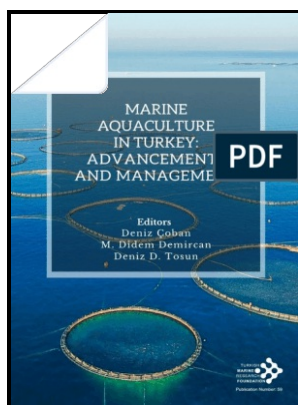

-

v. 29

Developments in biochemistry, Molecular mechanisms of transport - proceedings of the 22nd Bari Meeting on Bioenergetics, International Symposium on Molecular Mechanisms of Transport, Bari, Italy, 29 September-1 October 1991

Notes: Includes bibliographical references and index.

This edition was published in 1992

The vast field of biomembrane transport has made great strides towards the understanding of its mechanisms by the molecular approach.

But we know that a simple core of nucleic acid embedded in a protein coat made the simplest unit of life except for viroids. Cellular cytoplasmic membranes where respiratory and photosynthetic energy transducers, as well as ion-transporting ATP-synthases ATPases are also part of this membrane.

Transport systems in a variety of membranes such as cell membranes, mitochondria and bacteria are discussed. Thus, this volume describes major achievements and new openings of interest to scientists from a variety of fields involving biological transport. The vast field of biomembrane transport has made great strides towards the understanding of its mechanisms by the molecular approach.

Although the story of metabolic biochemistry which is often taken to include bioenergetics essentially belongs to the twentieth century, progress in this area cannot be understood without recourse to previous centuries. Three sections cover the X-ray crystallographic analysis, mutational analysis and mechanism of action of mitochondrial and prokaryotic respiratory enzymes, ATP synthase and mitochondrial carriers.
