### Current Grants by Cancer Type

It is estimated these tests could be applied to 10-15% of all adjuvant patients. Additionally, three separate stand-alone meetings were held between the Chair and Group members with patients, their family members and NHS Tayside consultant oncologists.

### Tayside breast cancer patients were 'treated differently'

The report below provides detailed findings, conclusions and 5 recommendations for the key stakeholders to take forward.

### Tayside cancer survivors concerned after decision to suspend screenings in wake of coronavirus

The American Cancer Society, Inc. The current reduced dose adjuvant and neo-adjuvant regimen being used by NHS Tayside is at variance with that used in the other NHS Scotland centres.

### Clinical management of breast cancer in NHS Tayside: risk assessment of the Healthcare Improvement Scotland report

Our system of organizational governance ensures the input of appropriate experts on decision making and strategic oversight of comprehensive nationwide operations. Dr David Dunlop, senior medical officer for cancer with the Scottish Government, has been appointed to review 14 cases where the women in question later died. NHS Tayside said dosages were lowered to reduce side effects.

### Overview

American Cancer Society is committed to efficiency and transparency and relies on direct mail both postal and online and special events including Relay For Life, Making Strides Against Breast Cancer, Determination, Coaches Vs.

### Hope for clarity as risk report into Tayside's lower chemo doses published

Triple-negative breast cancer is more likely to recur than the other 2 subtypes, with 85% 5-year breast cancer—specific survival for stage I triple-negative tumors vs 94% to 99% for hormone receptor positive and ERBB2 positive. For every 14,000 woman screened regularly for 10 years, 1 woman may develop breast cancer because of this radiation. NHS Tayside fully accepts the findings of this report.

## **Cancer**

Older women have a higher chance of getting breast cancer, particularly after the menopause.

### **Tayside breast cancer patients were ‘treated differently’**

We will not update the guideline at this time.
