Discussion focuses on how self-organization may occur within constituent elements of a feedback system—the input function, the output function, and goal values being used by the system—and how feedback processes themselves can reflect self-organizing tendencies. The validity of the DIT

is based on seven criteria briefly discussed , and hundreds of studies have produced significant trends. Not only is its scope adequate to the challenge of this rapidly growing young discipline, but the focus is clear: intelligible, up-to-date theories of mental processes are grounded in the latest findings of the brain sciences.
