Artificial control of in

Most elements have threshold frequencies that are ultraviolet and only a few dip down low enough to be green or yellow like the example shown above. Setting K_{max} equal to zero for this cutoff frequency ν_c , we get: Jones, Andrew Zimmerman.

How do photoelectric cells work?

This was confirmed quite well by the experiment.

Artificial control of in

I think this much information should be enough to answer your question.

Millikan's Experiment to explain Einstein's photoelectric effect and to determine the value of plank's constant

Use of Photoelectric Cell in Burglar Alarm: The photovoltaic cell is used in a burglar alarm.
