Technical Information

Resin laminated safety glass Resin laminated glass is manufactured by pouring liquid resin into the cavity between two sheets of glass which are held together until the resin cures.

HANDBOOK OF GLASS PROPERTIES

For a free path of greater than 1500mm a minimum Class A, no penetration glass should be used. Robust annealed glass may be used in commercial frontages, details of which are given later in this section. It is the responsibility of the designer or the specifier to assess the risk in ANY area, taking account of the use of the building and the likely activity of the users.

Glass Samples & Literature

Tapers prepare the wallboard for painting. Job opportunities are expected from growth in the construction industry and from the need to replace glaziers who leave the occupation each year.

Technical Information

Drilling holes in glass other than that which is to be toughened can weaken it. For domestic applications guarding is to be provided to protect changes in level greater than 600mm.

Glass databases

El-Mallawany CRC Press, 2001, ISBN: 0849303680 Glastechnische Tabellen by W.

HANDBOOK OF GLASS PROPERTIES

Mazurin, is the largest existing resource of glass properties, including over 1,000,000 experimental values for 286,000 glasses compiled from over 22,000 references. Compliance with BS 6262 Part 4 will also satisfy the requirements of Regulation 14 of the Health and Safety at Work Act. The

interlayer also absorbs impact energy, reducing the risk of penetrating the panel.

Glaziers : Occupational Outlook Handbook: : U.S. Bureau of Labor Statistics

All databases contain citations to the original data sources and the chemical composition of the glasses or. Also sometimes referred to as cast-in-place laminated glass, this method is ideal for laminating glass having a heavily textured or patterned surface.
