Conflicts between work and family and fathers' mental health

Proper division of household work: The biggest problem arises due to unclear and hasty division of household work between the partners.

Factor Structure and Psychometric Properties of the Work

Of married women with older children 6 to 17 years of age, 73. To cope, they are more apt to use technology and purchase household services compared with other dual-income couples. Social Indicators Research, 73, 43—70.

Living Together: The Economics of Cohabitation

But the higher income of two-earner families must be adjusted for the loss of home production.

Work

The effects of cognitive and noncognitive abilities on labor market outcomes and social behavior. The behavior of maximum likelihood estimates under nonstandard conditions. Women in these couples rate their career success significantly higher than other groups, but also reveal the widest gap between actual and preferred work hours and the lowest self-rated success in balancing work and family demands.
