Rural and urban areas: comparing lives using rural/urban classifications

Taken together, our results show heterogeneous employment effects of minimum wages by region, skill, and gender.

Minimum wages and employment in China

This suggests that the positive income effects of remittances may be offset by the negative effects of a missing parent due to migration, more visible in wealthier families where financial constraints may not be as binding. Khera R 2011 The Battle for Employment Guarantee: Oxford University Press. The visualization presents three scatter plots using 2010 data to show the cross-country correlation between i education expenditure as a share of GDP , ii mean years of schooling, and iii mean PISA test scores.

Minimum Wage Increases May Explain Decline in Teen Employment

The likelihood ratio χ^2 test is significant in both cases, but the value for the remittances model is 30 times that of the school enrollment model. Once the GTN intervention was implemented, its groups met regularly monthly for health promotion activities. This time-weighted average method is used for our study because the adjustment date varies substantially across county and year in China.

What determines adult cognitive skills? Influences of pre

To emphasize the points above, here we see a map which shows the evolution of mean years of schooling across the globe, using a related, but different source. The other estimate is by Sun and Shu 2011 who use a dataset of in 9 cities of Guangdong province in 2006, 2008, 2009 and 2010 and find that the proportion of rural-migrant workers who earn less than the monthly minimum wage in the four years is 9.

The Effect of Girls' Education on Health Outcomes: Fact Sheet

The same potential instruments identify all three life- cycle stage experiences: The reduced-form demand relations for the three life-cycle stage

experiences in relations , , and suggest potential instruments that could be used to identify the different life-cycle stage experiences in the adult cognitive skills production functions in and. There is quantitative evidence that rural areas are better off than urban areas on a number of different measures, such as unemployment and crime, but there are substantial differences within both rural and urban areas.
