They could be targeted at regional as well as global temperature modification and could be combined with mitigation to limit the rate or the peak magnitude of warming.  
 © Earth's most recent glacial period peaked about 26,500 years ago.

### **Coral reefs and climate change**

IPCC 2007a:8 projected that in the future, over most land areas, the frequency of warm spells or would very likely increase. Environmental Protection Agency EPA , Washington, DC, 271 pp. Prospective authors were nominated by their respective agency, university, organization, or peers.

### **Coral Reefs: Climate Change Makes It Hard to Protect Corals**

The 1997 Niño caused huge problems all over the world, from droughts to floods and poor yield of crops. Long-Term Temperature Goals and the Paris Agreement The idea of limiting globally averaged warming to a specific value has long been examined in the scientific literature and, in turn, gained attention in policy discourse see DeAngelo et al. They must be maintained consistently, as waves and salt quickly erode concrete, and as sea level rises they will need to be built higher and higher.
