Craniofacial development / edited by Yang Chai

At CS 2, the inferior border of C2 is notched or indented, with the notching of the inferior border becoming more obvious with maturity. The Liverpool group found that the intra- and interobserver agreements were substantial, concluding that the current method of CVM classification is reproducible and reliable. We also have found it necessary only to analyze the bodies of the second, third, and fourth cervical vertebrae, making the method less complex.

Craniofacial Growth Series Volume 54

May be very minimal identifying marks on the inside cover. Several systematic reviews of the CVM method and its reliability have been published previously, — with some investigators questioning the reproducibility of the CVM method.

Craniofacial Growth from Infancy Through Adulthood: Background and Clinical Implications

Guidelines for the Cervical Vertebral Maturation Method The methodology presented in this paper is based on our experiences analyzing numerous treated, — and untreated, — lateral cephalometric samples during the past 2 decades. Kelly ; editor-in-chief, James A.

Craniofacial development / edited by Yang Chai

Curve of Spee, the perpendicular distance from a flat plane constructed over the incisal edges of mandibular incisors to the cusps of mandibular first molars, was calculated by averaging the greatest distances from cusp tips to the plane on the right and left sides.

Aging in the Craniofacial Complex

These islands of bone can confuse the staging process because they can appear to be extensions of the inferior border, leading to the erroneous appearance of an early concavity or notching.

Craniofacial Growth from Infancy Through Adulthood: Background and Clinical Implications

Under his leadership, the Center gained international prominence not only for interdisciplinary research in craniofacial biology, but also in developmental biology, nutrition, public health, morphometrics, anthropology, linguistics, and pediatrics. The Biology of occlusal development : proceedings of a sponsored symposium honoring Professor Robert E. B shows characteristics of both CS 3 and CS 4.

Craniofacial Growth Series

We also thank the contributors for sending us their material in a timely fashion. Right, same radiograph with C2, 3, and 4 outlined and the location of the spikes indicated. This article describes the basic biology that underlines craniofacial growth and the common dentofacial growth problems with which children present.
