### Course: ENV 645a Urbanization, Global Change and Sustainability

In his marking the day, UN called for putting communities at the heart of the cities of the future.

### Course: ENV 645a Urbanization, Global Change and Sustainability

UN Habitat underscored that the value of sustainable urbanization can only be unlocked provided that various planning, finance and governance conditions are in place.

### What Is Sustainable Urban Planning?

The cities of the world's emerging economies are increasingly drivers of global prosperity while the planet's resources are fast depleting.

### Sustainable urbanization critical to COVID

Anaerobic digestion, where biodegradable waste is decomposed in the absence of oxygen producing a methane-rich biogas suitable for energy production, could provide a critical solution to growing waste issues, while simultaneously reducing external energy requirements Curry and Pillay, 2012. While it is true that in a developing country there shall have to be developments but that development shall to be in closest possible harmony with the environment otherwise there would be only development but no environment which would result in total devastation, though however may not be felt at present but at some future point of time. From playing a marginal role within climate change frameworks and funding mechanisms, we must today seize the opportunity and harness the potential of cities to realize a sustainable future for all.
