### Rocky mountain spotted fever

American dog ticks are the most commonly encountered type of tick in Ohio, and they are found throughout the state.

### Rocky Mountain Spotted Fever

It causes vomiting, a sudden high fever around 102 or 103°F, headache, abdominal pain, rash, and muscle aches. Once in the body, the bacteria attack and severely damage the linings of blood vessels. These complications are most frequent in persons recovering from severe, life-threatening disease, often following lengthy hospitalizations.

### Rocky Mountain Spotted Fever

If you do find a tick attached to your body, don't panic. The disease was originally noted to be concentrated on the west-side of the Bitterroot river. On day 6 or later, the areas of rash may show tiny broken blood vessels and small hemorrhages under the skin.

### Rocky Mountain spotted fever

This tick is the most commonly identified species responsible for transmitting R.

### Rocky Mountain Spotted Fever (RMSF)

Click on the link to view a sample search on this topic. The deaths of Gettinger and Cowan, and the near death of the janitor's son, were the results of inadequate , but in the 1920s, the elaborate biocontainment systems of today had not been invented yet. Though it would be decades before scientists discovered the tick as the carrier of the disease, in as early as 1866, Doctor John B.

### Rocky Mountain spotted fever

## **Rocky Mountain spotted fever**

If you don't begin receiving treatment within the first five days, you might require antibiotics in the hospital.
