It remains a classic work on the subject. The book begins with an introductory chapter that surveys the entire field to be covered, and follows with eight chapters each dealing with progress in one of the major branches of the metallurgical industry: ore dressing, pyrometallurgy, iron and steel, the major non-ferrous metals, new metals such as uranium, germanium and cobalt , precious metals, the shaping of metals, and metallography. LC 58-12570 A book that contains practically all the information available on thorium - production technology at the time of the conference.
