Halifax Harbour and Approaches

Team members also worked in the ocean where they tagged adult salmon to understand the behaviour of different stocks on their way to spawning grounds. This adult male has been diving to great depths 300-400m frequently, which is uncommon for ringed seals.

Ice chart descriptions

Visualization and Modeling of Complex Marine Observations CCA2; FQ1, FQ2 Project Leaders: Joanna Mills Flemming Dalhousie U Other OTN Canada participants: D. This makes voyages safer and helps to protect the marine environment.

Halifax Harbour and Approaches

These rates of travel may be indicative of foraging behaviour. The mean coefficient of variation between duplicates was 6.

History

A shelf-wide assessment of the spatio-temporal variability of the inorganic carbon system was made relying on observations in spring April and autumn October. The second ship was a 340-ton destroyer launched in 1898 and served through the First World War. Pacific salmon commercial and First Nations fisheries: delayed mortality, behaviour and physiology of released bycatch in coastal waters FQ1, FQ3, CCA3, CCA4 Project Leaders: Scott Hinch UBC Other OTN Canada participants: S.

Halifax, Cape Breton announce school closures with major storm bearing down

One step toward such improved process-level representations, carried out during this reporting period, was the analysis of phytoplankton dynamics in the model. As such, it remains unclear how post-spawning condition and the initial decision about when to initiate downstream migration then affect the marine migratory behaviour and longer-term survival of Atlantic salmon kelts that either recondition at sea for from a few months i. The synchronous and geographically widespread decline of many different populations might suggest a common driver ; see also for

Pacific salmon.

On the Rocks: Shipwrecks of Nova Scotia

I would also like to thank Ian Fleming, Jan G.

Ice chart descriptions

It was intended for the west coast again, but did not leave Halifax until November 4, 1991. As per the Cabinet Directive on Improving the Performance of the Regulatory System for Major Resource Projects, the Canadian Environmental Assessment Agency is responsible for managing the federal environmental assessment process for major resource projects.
