7 Irregularities that suggest Earth's Moon was engineered

The craters themselves, which have been preserved for billions of years, provide an impact history for the moon and other bodies in the inner solar system. The man was Neil Armstrong, member of the Apollo 11 mission. This is because the only remaining sunlight reaching the Moon at that point is from around the edges of the Earth, as seen from the Moon's surface.

What Is The Moon?

The moon was likely formed after a Mars-sized body collided with Earth, according to NASA. Originally thought to be a third-stage Saturn booster from, it was later determined to be an and designated as. Materials brought back by the Apollo missions largely support this hypothesis over other ideas, such as those that suggest the Moon was captured by Earth's gravity.
