EUR

Available in English Zero Waste Europe released a policy briefing which addresses the current EU legislation on waste management and analyses different ways to design a comprehensive and coherent waste prevention framework which embeds all different steps of the supply chains from sustainable production patterns to sustainable waste management.

EUR

The steps described above would make best use of existing legislation, using already agreed Comitology procedures and review processes. It concerns the collection, treatment and discharge of urban waste water and the treatment and discharge of waste water from certain industrial sectors. It also includes rules for the collection, treatment, recycling and disposal.

Solid waste management in European countries: A review of systems analysis techniques

Nicolas Buclet Waste management issues can be approached in several ways.

Municipal waste management across European countries — European Environment Agency

In some cases these strategies also include pre-treatment such as mechanical-biological treatment, the outputs of which are then recycled, incinerated or landfilled. However, the Landfill Directive does not prescribe specific treatment options for the diverted waste.

Municipal Waste Management in Europe : N. Buclet : 9781402005435

Annals of Public and Cooperative Economics, 83 4 : 505-532. EEA countries achieved an average total recycling rate of 33 % in 2014, compared with 23 % in 2004. Dioxin mass balance in a municipal waste incinerator.

Summary of the current EU waste legislation

It intends to reduce the consumption of this type of plastics and states that Extended Producer Responsibility is involved in the targets as well as calls the Member States to ensure separate collection. JEL classification: solid waste, waste management, disposal facilities, waste trade, regulated markets. The performance of individual countries varied.
