From there, they can travel to nearby lymph nodes or to distant parts of the body. Chemotherapy drugs, such as leucovorin calcium, fluorouracil, oxaliplatin, and irinotecan hydrochloride, work in different ways to stop the growth of tumor cells, either by killing the cells, by stopping them from dividing, or by stopping them from spreading. Part 2A of the study will evaluate the safety and tolerability of dostarlimab at fixed doses of 500 mg administered every 3 weeks Q3W and 1000 mg administered every 6 weeks Q6W. Removing the colon or rectal tumor and nearby lymph nodes enables a pathologist a physician who examines laboratory samples of body tissue for diagnostic purposes to more accurately determine the stage of the cancer.
