## How Royal Enfield became the top

Hero owns about 50% of the Indian market figures found in a Gizmag article. Modern batteries are able to cram more capacity into the same physical size so this is indeed possible.

## Which spark plug for classic motorcycles? â€¢ Matchless Clueless

The P11 series carried on in production until the spring of 1969. However I think this is probably taking originality a step too far for most classic bike owners given the advantages of the other more modern battery types described below, especially with dummy battery boxes readily available to make a modern battery look authentic. The bike used to be my dad's and was left over for 50 years.

## 9780850454048

Much more expensive, but need fewer volts to give a big fat spark, so great for easy starting or an ageing magneto. You can read more about KLG spark plugs, understanding their reference codes and determining modern NGK and Champion equivalents on the page. The battery is made up of a number of cells each of which gives approximately 2v of output, so the total voltage of the battery is determined by the number of cells it contains.

## Top 10 revived British motorcycle brands

The closer you look, the more the design strengths reveal themselves.

Book has minor shelf wear, small stains on page edges. I hope that this guide has been useful for you! The original plug would have been something like a KLG FE80 no longer available for which the modern equivalents are a NGK B7ES or B8ES, or a Bosch W225T2 old code or W5CC new code , or a Champion N4 or N5 probably labelled as N4C or N5C now. By 1956 they had eight models in their line up, but the number had dwindled in 1965.

### **Matchless is back**

Never found out the right plugs for that G9. All this is changing and people now want better quality and performance.
