## Manganese recovery as chloride from ores and slags

Except as provided in paragraph 4 , any standard under this section which has been promulgated, but has not taken effect, before such date shall not be affected by such Amendments unless modified as provided in this section before such date or under such Amendments. The authors produced submicron particles of lead oxide by a thermal process coadjuvated by poly N-vinyl-2- pyrrolidone , which helps decrease the particle size. The unique structure of the nanoparticles made them stable, linker-free, and size-tunable.

If the promulgates a standard under subsection d that would be applicable to the source in lieu of the established by permit under this subsection after the date on which the permit has been issued, the or the shall revise such permit upon the next renewal to reflect the standard promulgated by the providing such source a reasonable time to comply, but no longer than 8 years after such standard is promulgated or 8 years after the date on which the source is first required to comply with the emissions limitation established by paragraph 5 , whichever is earlier. Synthesis of Nanoparticles from Recycled Materials Metal and Metal Oxide Nanoparticles Various procedures have been used for the synthesis of several types of nanomaterials from wastes after suitable pretreatment either physically or chemically or combinations of both.

The metals recovered from WPCBs can be used to create nanoparticles. A significant portion is landfilled or openly burned, contributing to air pollution and environmental degradation.

If the deposit is soft, such as coal, potash, or salt, mechanical means can be used to cut and load the deposit, thereby eliminating the need for drilling and blasting.
