Identification and Evaluation of Mental Retardation

Billings and Moos showed that family stress and low support added to the prediction of child disturbance beyond that accounted for by having a depressed parent. Other developmental screening tests are also available. Metabolic testing in the absence of a history suggestive of metabolic disease is probably of little value.

Maternal depression and child development

In a study of 120 depressed postpartum women , interpersonal psychotherapy reduced depressive symptoms and improved social adjustment in the subjects compared with the control group on the waiting list. The Individuals with Disabilities Education Act. Definition, classification and systems of supports.

Identification and Evaluation of Mental Retardation

Children of depressed parents are also at higher risk of psychopathology, including affective mainly depression , anxiety and conduct disorders.

Maternal depression and child development

Although the interaction between parents and their handicapped child is beyond the scope of the present paper, it has been described that parents of mentally retarded children report higher depression scores than control parents , and that caregiving difficulty is a predictor of maternal depression. Denver developmental screening test II. Most mentally retarded patients who visit a genetics office undergo chromosome analysis.

Identification and Evaluation of Mental Retardation

Other risk factors for postpartum depression include a history of mood disorders, depression symptoms during the pregnancy and a family history of psychiatric disorders. Role of fathers The role of fathers and paternal distress in child development are understudied, meanwhile, primary emphasis continues to be placed on mothers, possibly because the main caregiver for the young infant is usually the mother. His muscle tone was

mildly low but within the reference range.

Maternal depression and child development

They were rated by their dysphoric mothers as being more vulnerable, and having more internalizing depressed and externalizing problems aggressive and destructive , which are associated with lower interaction ratings. On the other hand, stress factors can be responsible for adverse child outcomes in the absence of maternal depression.
