GEOLOGICAL SURVEY OPEN-FILE REPORT 93-207, P. The temperature of the superheated slag in the superheated puddle was not measured but the extremely fluid condition in the puddle could be observed through an observation port in the side of the furnace. Some of the collector metals as noted above may also be admitted to the furnace in the form of their oxides or hydroxides or other compounds if they are suitable for reduction to metal in the furnace with reductants, e.
