Psychological tests and measurements

Using a wireless device as opposed to a laptop computer , researchers can bring a survey to otherwise inaccessible populations in the non-virtual world, such as patients in a busy healthcare setting, individuals in rural settings, or socioeconomic groups that do not have access to computers or the Internet. For example, relatively little may be known about the characteristics of people in online communities, aside from some basic demographic variables, and even this information may be questionable ; . The handbook includes cutting edge descriptions of the design, implementation, and use of electronic surveys, and also includes discussions on the challenges associated with online data collection and profiles of selected online measures.

Generating Samples from Virtual Groups and Organizations Some virtual groups and organizations provide membership email lists that can help researchers establish a sampling frame. Multimedia can also be useful when targeting low literacy populations, since video and audio messages guide participants through an online survey. The cost of these products and services varies depending on the types of features and services a researcher desires.
