## Communication in Nursing Practice

The vital component of patient education is therapeutic communication,. Think about broaching small, less emotionally charged topics at first, as a way of opening the door to more significant conversations. Determining concept defining attributes After determining all uses of nursing student-patient therapeutic communication and reviewing its various definitions, the researchers determined the concept characteristics.

**arrow right**

Accepting patients with different cultures and characteristics and showing empathy towards them while respecting interpersonal boundaries play an important role in prevention of possible abuse of patients and leads to continuity of care and therefore, it is suggested by some researchers , , —. Also, researches regarding nursing student therapeutic communication with patients are limited. This non-verbal communication is expressed by facial expressions, gestures, posture and physical barriers such as distance from the interlocutor.

## Communication Skills in Healthcare: A Guide to Practice

He is the proud father of five children, all of whom are married, and a grandfather of ten. One of the most significant sections of ethical behavior is communication ,.

## Communication in Nursing Practice

Recommending a solution to the situation may involve a request for further tests, for example. Everyone has the right to let off steam, and there is nothing inherently wrong with venting to a trusted confidante, providing you find an appropriate place and time to do so.
