The Adolescent (1979)

When dad returns, what will the family and the doctor do? Researchers have identified other components that also play a part in identity formation, such as identification by gender, ethnicity, and sexual orientation. Adults need to understand this complexity, respond in a supportive way, and seek professional help for such adolescents if needed. Understanding what to expect at different stages can promote healthy development throughout adolescence and into early adulthood.

Stages of Adolescence

Mild anxiety and other challenges are typical, but serious mental health conditions also emerge during adolescence. Although the thinning of gray matter and the pruning of synapses discussed in might seem to reduce processing power, theoretical mechanisms emphasizing streamlined gist-based processing suggest that pruning might be important in developing the capacity to make sound decisions. The transitional period can raise questions of independence and ; as adolescents cultivate their sense of self, they may face difficult choices about academics, , , identity, drugs, and.

The Adolescent (1979)

These tasks require new skills, and all require some level of risk-taking to reap what are likely to be very positive rewards. She is an Assistant Professor of Pediatrics at the University of Wisconsin School of Medicine and Public Health.

The Psychology of Adolescence

Marie, at 13, goes with her parents to visit her grandmother in a small town near Avignon.

Adolescent Development Explained

. This reality highlights the importance of developing social competence, another of the key tasks of adolescence.

Adolescent Development Explained

Young people are especially prone to psychiatric self-labeling. Adolescents act despite awareness of risks.

Adolescence

He identified two ways in which these basic tasks relate to the risks that adolescents take. Verbatim thinking is more specific and relates to thinking about and remembering specific facts or situations in detail. Other researchers have shown that young people who develop autonomy either too early or too late in their development often have poorer outcomes than those who develop it at the same time that their peers do ; ;.
