For most hydrophobic drugs, the range of σ , D, and v typically are less than 10-fold. The process requires solute molecules migrate from one particle to another via either Ostwald ripening or particle aggregation. Facile pathway to generate agrochemical nanosuspensions integrating super-high load, eco-friendly excipients, intensified preparation process, and enhanced potency.

The quality of science taught at the classes, the groundbreaking research performed, and the engaging journal clubs were some of my first exposures to doing rigorous and high-quality science. Organized by a group of Latino community leaders and health activists who dreamed of developing a comprehensive health center for the Latino community in Seattle, with satellite clinics in rural communities in western Washington. Unfortunately, technologies that can make many pharmaceutical-excipient combinations at the same time, then automatically feed each combination into a system for identifying the combinations that have optimized properties are not known.
