## **Institutional change and innovation system transformation: A tale of two academies**

It may lead to a moral hazard by reducing precautionary activities, while other adaptation strategies may reduce the need for insurance. Our examination reveals the use of a plethora of technological tools and platforms to support online learning: web-based learning platforms, video-conferencing tools, Massive Open Online Courses MOOCs , streaming conferences, instant messaging tools, and educational apps, among others, to support new methodologies to enable learning processes. This 2018 paper by David Rose and Jason Chilvers argues that key dimensions of responsible innovation—anticipation, inclusion, reflexivity, and responsiveness—should be applied to the emerging technologically-driven agricultural revolution.

## **Innovation and Social Learning: Institutional Adaptation in an Era of Technological Change**

The second factor that affects engaging in action addressing the climate change challenges is uncertainty. Their further use is slowed down by objections from environmental groups. It is especially important to develop mechanisms that ensure farmers have insurance against extreme events.

## **PROGRIS**

These externalities may be positive, for instance through pollination, or negative, for instance through the build-up of resistance. Furthermore, subsidized insurance may lead to engaging in risky and environmentally damaging behavior see survey by Smith and Goodwin.

## **Innovation systems**

The pandemic forced a period of global experimentation with remote teaching. The New Era of Global Competition, pp.

## **Institutional change and innovation system transformation: A tale of two academies**

After an initial period of adaptation-experimentation to convert rapidly to remote teaching, however, academics highlighted some interesting lessons for overcoming barriers. Legal and policy research that lead to innovative water right reform will be an important step in designing and

implementing strategies to address water supply implications of climate change. Various methodologies for online teaching and evaluation have emerged and proven useful in the current pandemic the authors used some of these in remote teaching.

### **Innovation and Social Learning**

The innovation process goes through multiple stages. The design and implementation of these solutions is challenged due to uncertainty about magnitude and timing of change. This paper will examine some significant technological resources and methodologies that universities are using, while also discussing the main obstacles and barriers encountered both by academics and students and at an institutional level.

### **Innovation and Social Learning**

For example, temperature serves as an important barrier to prevent pest infestations and while insects and other pests can move in response to changing conditions, trees are stationary.

### **Frontiers**

The reality of the new normal, disrupted by COVID effects, has involved a radical transformation of education and training, and one of the sectors undergoing dramatic digital transformation is global higher education. Philip Shapira is Professor of Innovation Management and Policy at the , University of Manchester, and Professor of Public Policy at Georgia Institute of Technology.
