## Madagascar Fish

Can anyone suggest a possible ID.

## Fossil Atlas Fishes

The fossil's features are instead a hybrid between those of a starfish and a sea lily or crinoid—not a plant but a wavy-armed filter feeder which fixes itself to the seabed via a cylindrical 'stem.'

## fossil record and biogeography of the Cichlidae (Actinopterygii: Labroidei)

These fish existed 50 million years ago during the epoch. Piveteauia and Whitelia are both coelacanths. Sea star are also vulnerable to high temperatures, and their feeding and growth rates suffer as water temperature increases.

## Living Fossils: Echinoderms

Their range spans rivers, large streams, and lakes from Costa Rica and Cuba to Texas and eastern North America, as far north as Lake Champlain. In addition, similar tubules run posteriorly from these tubes to the dorsal surface of the roof, where they anastomose with the bones. .

## Placoderm

Henry Gee Senior Science Editor of Nature , an introduction, 22 research papers by leading vertebrate paleontologists from 14 countries, and 220 photos and illustrations, this book covers important fossil forms ranging from the Paleozoic to the Cenozoic and reflects research advances based on traditional paleontological methods as well as new techniques such as CT scanning. The family Osteoglossidae must be at least as old as Cenomanian and there may be stem representatives known as far back as Early Cretaceous but more evidence is needed. Both the fauna crocodiles, alligators, boa constrictors and some subtropical fish families and the flora such as large palm trees indicate a climate much like that found along the Gulf Coast today.

**Fossil atlas, fishes : Frickhinger, Karl Albert, 1924**

Fossil fish are some of the most aesthetic and collectable out there.
