Lasting Connections

Our strength is not only the manufacturing of separate products, but also we offer systems which require high knowledge in project management, detail engineering and process knowledge. This has enabled us to maintain a consistently high product quality. In order to be fully liquid, it must be cooled down to -253°C -423°F.

Brochures & certificates // BUCHEN UmweltService GmbH

About voestalpine Böhler Welding We are a leader in the welding industry with over 100 years of experience, more than 50 subsidiaries and more than 4,000 distribution partners around the world. The extensive range of approximately 2.

Hydrogen Compressors

As the material is compacted, pressure within the material increases, reaching a peak just above the line of closest approach between the rollers, and subsequently drops rapidly to zero. The latter supply, same as the micro fuel cells for houses and other buildings, power and heat and their only exhaust is clean water. Our products range from individual components such as motor-driven spindle pumps, pressure intensifiers, valves, pressure vessels, fittings and tubing to complete custom-made systems.

Diaphragm Compressors

The way in which this energy is released in case of a failure is of paramount importance to the safety of the plant and its personnel. Hydrogen in rail-bound transport For rail-bound transport in areas without overhead line power supply, hydrogen powered trains can substitute the usage of diesel-powered machines.
