Reflection and other metacognitive routines such as think-alouds and reading logs for science investigations are also used in PD sessions. In a randomized experimental study, students of teachers who participated in any of these PD opportunities had significantly greater learning gains on science tests than students whose teachers did not participate, and these effects were maintained a year later. Teachers participated in four hours of this coursework per month throughout the school year.

Feedback may be offered as teachers analyze lesson plans, demonstration lessons, or videos of teacher instruction, which also provide opportunities for reflection about what might be refined or retained and reinforced.

In a comparison group study, students whose teachers participated in the program demonstrated significantly larger improvements in science achievement over time than students whose teachers experienced business-as-usual PD. A third group used metacognitive strategies to reflect on their instruction and its outcomes. We define effective PD as structured professional learning that results in changes to teacher practices and improvements in student learning outcomes.
